This is a sample success story:

What do you remember from the KTEL or TLC class?

I remember being amazed at how quickly I was able to double my reading rate, it took less than an hour. I remember that at the end of the class the instructor asked if there were any thing else that any of us wanted. I said I wanted his job, 12 years later I got it. After a couple years training I became the instructor of the course.

What tools or techniques were/are most useful to you?

The importance of looking up misunderstood words if I want to achieve 100% comprehension and full understanding. I keep a demo kit handy for times that I study something that I absolutely want to insure my understanding and recall of.

Have you attempted to help others by showing them skills from the course?

I have taught my children and grandchildren the main points of the class and helped them tremendously in school.

Did the course help you in your job, if so how?

I was a trainer/developer in the computer field. I wrote manuals and taught classes. I employed all of the skills that are part of the KTEL/TLC program in the performance of those tasks. I was skill and ability was widely recognized and appreciated by both my students and by my fellow instructors.

As a journeyman Machine Repairman I was, on occasion, required to train apprentices. I found that if I utilized the KTEL techniques to deliver that training it was effective every time with every apprentice.

Any final comments?

I can say with total confidence in the truth of the statement… If you want to be at the top of your game, to excel in your field, apply these tools religiously. You are guaranteed to succeed. I recommend this course to everyone, we are all in a "learning for life" society, knowing how to do so accurately and quickly can only be an advantage.
